Course Description

This course will introduce fundamental concepts and paradigms underlying the design of modern programming languages. For concreteness, we study the details of an object-oriented language (e.g. Java), and a functional language (e.g., Scheme). The overall goal is to enable comparison and evaluation of existing languages. The programming assignments will be coded in Java 5 and in Scheme.

Prerequisites

- Data Structures and Algorithms. (Equivalently, CS400/600.)
 - Experience with programming in imperative languages such as C/C++, Pascal, or Ada.
-

Course Text and Material

1. On-line Lecture Notes.
2. OOP Basics
3. K. Arnold, J. Gosling, and D. Holmes: The Java Programming

Language. Addison-Wesley Publishing Co., 4th Edition, 2005. ISBN 0-321-34980-6

Course Load

The course load includes a mix of homeworks and programming assignments worth 30 points, a midterm worth 30 points and a final worth 40 points. Normally, CS680 students are assigned additional homework problems and are expected to solve additional/different problems in the tests.

Grading

The letter grades will be assigned using the following scale: A[90-100], B[80-90), C[70-80), D[60-70), and F[0-60). However, I reserve the right to adjust the scale somewhat to utilize the gaps in the distribution. Academic dishonesty will be "rewarded" with a grade of "F". "Sharing/reuse" of solutions to assignment problems is strictly prohibited.

Attendance Policy

All registered students are expected to attend all lectures. In case a student is absent from a lecture due to unavoidable circumstances, the student is still responsible for the material covered in the class, as it is typically available from the course web-page well in advance. Furthermore, the student is expected to find out about in-class announcements from their colleagues/instructor.

Class Schedule and Syllabus

Topic

Class 1	<u>Evolution of Programming Languages</u>
Class 2	<u>Syntax Specification : Grammars</u>
Class 3	<u>Object-Oriented Programming</u>
Class 4	<u>Symbolic Data; List Processing</u>
Class 5	<u>Styles : Functional vs Procedural</u>
Class 6	<u>Recursive Definitions (Scheme-Startup)(Examples)</u>
Class 7	<u>Abstraction : Higher Order Functions</u>
Class 8	Scoping; Closures
Class 9	Midterm (October 14)
Class 10	<u>Java Design Goals</u>
Class 11	<u>Types, Values, Variables</u>
Class 12	Arrays; Classes
Class 13	<u>Inheritance; Polymorphism</u>
Class 14	Interfaces; <u>Packages</u> ; <u>Strings</u>
Class 15	<u>Exceptions</u>
Class 16	<u>Threads</u>
Class 17	(continue) (<u>Scripting vs Systems PL</u>)
Class 18	SCHEME INTERPRETER (2/3 classes)
Class 19	<u>Code (scm/txt)</u>
Class 20	Hand Written Slides (<u>83M pdf</u>) (<u>43M pdf</u>)
Class *	Parameter Passing Mechanisms
Class *	Implementing Subprograms
	Final (November 16, 5:45pm-7:45pm)

Assignments (Fall 2009)

- Assignment 1
- Assignment 2

Exams (Summer 2009)

- Midterm

- Final

T. K. Prasad (10/01/09 08:46:58 AM)
